Non-contractual photos

1 - Description

The automatic cleaning machine cleans by dipping parts in a solvent bath.
The products to be cleaned are put on a plate which is manually inserted into the machine.

Then begins a quench cycle with oscillation followed by a drying cycle by air nozzle.

Automatized shutter system of the tray to limit the solvent evaporation during and after the quenching cycle.

A work slide can be docked and locked on the machine for an easy transfer of the tray.

2 - Technical Specification

- Cleaning Capacity : 665mm x 700mm x h100mm
- Frame : Stainless steel 304L
- Covering panel : aluminium
- Quenching time, oscillations' frequency, drying time configurable via HMI
- Cabinet with remoted HIM
 - Connection to extract steam on top
